

# Project Name Twenty Eight

**WHAT PROFESSION CAN NEVER BE REPLACED BY AI?**

# The team

## **Nathan Mesele**

An interior designer, carpenter and a student at alx who was responsible with the front end development of this project.

## **Lidya Yonas**

A medical student and a student at alx who was responsible with the front end development of this project.

## **Helen Tsegay**

A graduate Architect, import export documentation officer and a student at alx who was responsible with the front end development of this project.

# INSPIRATION

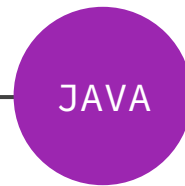

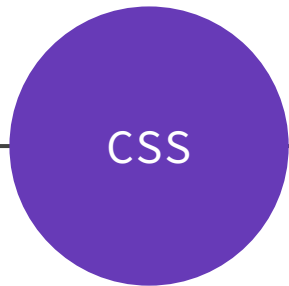

— — —

Our project was inspired by one of our group member who is an interior designer and has faced many challenges with customers not knowing what is best for their houses and unable to figure out which furniture they should buy and most of them not having much time to go to the store to choose and buy furniture. That's why he proposed solving this issue using our project.

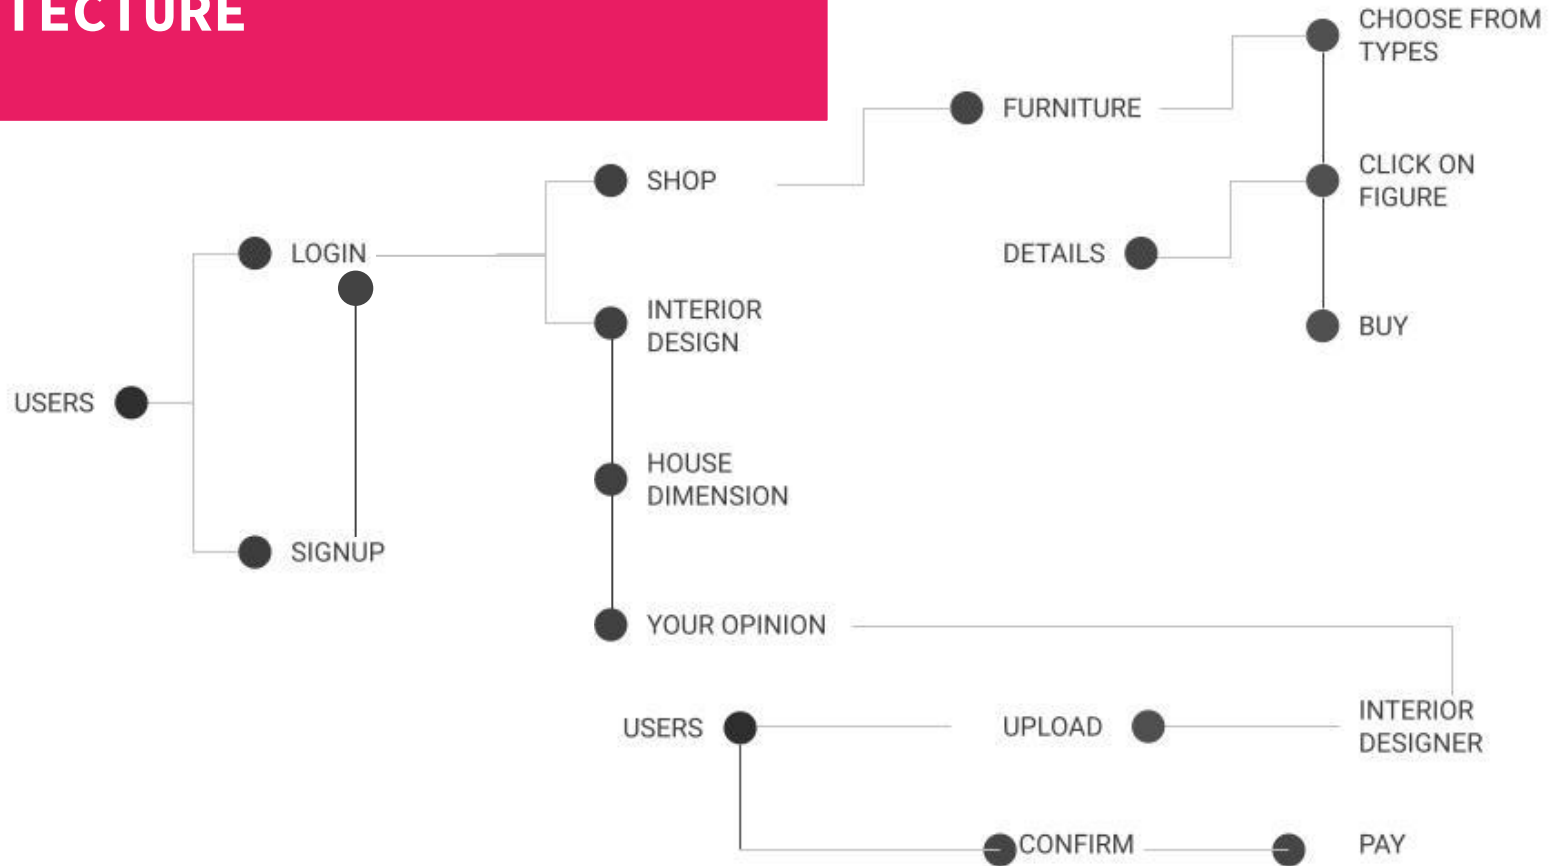

## STATEMENT OF THE PROBLEM

1. Loss of time and energy to go find an interior designer or the best furniture for your house.
2. Buying a furniture that doesn't go with your house size and design.

# The Webpage

# Twenty Eight Design+Furniture

---

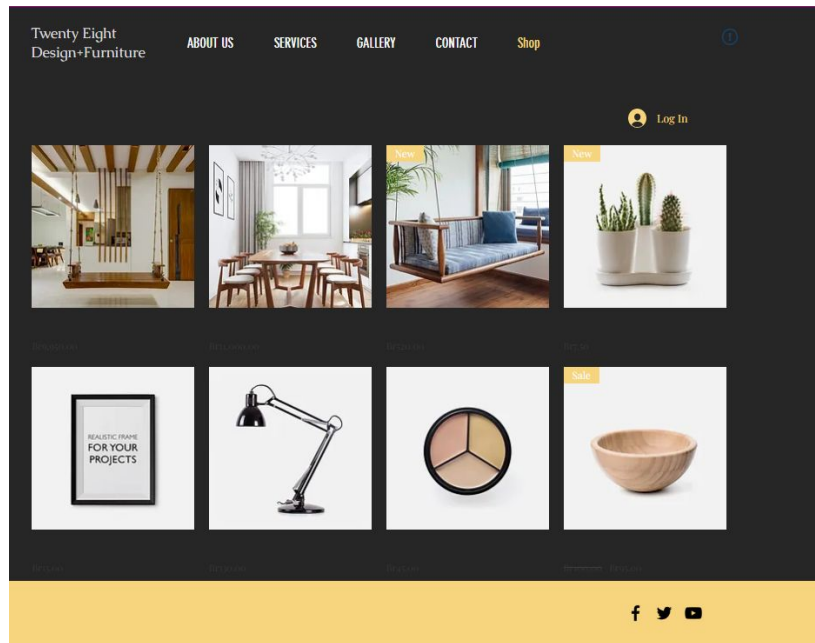

This web page helps people to order wood-based furniture from where they stand with a full description of the product and with a full detailed price tag. they can also choose an interior-based design based on their house dimensions. with full access to color decorations, kitchen cabinets, ceilings and claddings, and so on.

# Twenty Eight Design+Furniture

This portfolio project is intended to solve the time wastage of finding what you want to put in your house so you could make your house look better and more beautiful.

# Twenty Eight Design+Furniture

This website is made to help people around its local area but through time we plan to make it an internationally used app.

# DESIGN + FURNITURE

## Challenges

1. Time. At first, we wanted to create an app but changed it to a webpage due to the limited time we have.
2. Arranging the scale of the web page. To what extent should the app go?
3. Creating clear hierarchical Web page navigation.
4. Balancing features with simplicity.

## Solutions

2. Since we are beginners we decided to make an updatable web page that includes the necessary things for the time being.
3. By making it familiar to the other webpages people use. By not making it complicated.
4. we made a list of what the necessary things are and we tried to make it as simple as possible.

Through the whole process of this project we all got very interested to be a front-end designer.

**THANK YOU**
